

About

Our Project

The High-Tech Classroom (HTC) project is guided by principles of equity and innovation. Considering the potential impact of digital divide in deepening already existing social inequities and injustices, the project intends to address the issue through integration of technology in education.

REACHING EVERY
CHILD IN CLASSROOM

HTCs are digitally well-equipped classrooms that intend to leverage students' learnings and experiences through technology integrated curriculum prepared by skilled teachers. The main center of the HTC project is based within the National Innovation Center's premise at TU, Kirtipur.

How does it work?

Vision

To curtail digital divide and empower students, teachers, and communities to access and engage with global knowledge, ideas, and opportunities

Mission

To digitally empower every child and teachers in the classrooms thereby widening and deepening their knowledge, skills and cultivating culture of innovation.

Strategy

Supporting students and teachers to access infrastructure and resources and upskill them to use the resources that best fit their teaching and learning.
